

Project Design Phase

PROBLEM – SOLUTION FIT TEMPLATE

Project Name: Auto Ticket Classification Using Flow Designer

Maximum Marks: 2 Marks

Date: 1 October 2026

1. What is Problem – Solution Fit?

Problem–Solution Fit occurs when you have evidence that customers have a genuine need or problem, and that your proposed solution directly addresses that need effectively. Validating Problem–Solution Fit ensures that you are building something people actually want before investing significant resources into full-scale development.

2. Purpose of this Template

- Identify and clarify the core target customer segment and their primary pain points.
- Map existing manual or semi-automated workarounds to understand current limitations.
- Articulate the value proposition of the proposed solution (Auto Ticket Classification Using Flow Designer).
- Validate that the key features directly resolve the identified operational friction and delays.

3. Problem – Solution Fit Canvas Form

Please complete each section below for your project:

1. CUSTOMER SEGMENT(S)

Target users, IT service desk agents, helpdesk managers, and end-users benefiting from automated ticket triage.

2. JOBS-TO-BE-DONE / PROBLEMS

Manual classification delays, improper routing, SLA breaches, high ticket volumes, and agent burnout.

3. TRIGGERS

Events triggering the need for automation (e.g., peak ticket influx, misrouted critical incidents).

4. EMOTIONS (BEFORE / AFTER)

Frustrations during manual triage (Before) vs efficiency and confidence with automated routing (After).

5. AVAILABLE SOLUTIONS

Current tools, manual email triaging, static keyword search, or legacy dispatchers.

6. CUSTOMER CONSTRAINTS

Time, technical integration limits, ServiceNow instance permissions, budget, and learning curves.

7. CURRENT BEHAVIOUR

How support agents currently receive, read, assign, and re-route misclassified tickets.

8. CHANNELS OF BEHAVIOUR

Online: ServiceNow Portal, email queues, ITIL forms. Offline: Service desk calls, in-person requests.

9. PROBLEM ROOT CAUSE

Lack of real-time automated keyword analysis, human error during manual entry, and inconsistent category rules.

10. YOUR PROPOSED SOLUTION

Auto Ticket Classification Using Flow Designer

(Outline specific automated triggers, logic rules, and category assignment actions)
