

PROBLEM – SOLUTION FIT CANVAS

1. CUSTOMER SEGMENT(S)

Who are the end-users, IT support teams, helpdesk agents, and service desk managers benefiting from automated ticket classification?

5. AVAILABLE SOLUTIONS

What existing tools or manual workarounds do support teams currently rely on for ticket triage and assignment?

2. JOBS-TO-BE-DONE / PROBLEMS

What manual classification, improper routing, resolution delays, or high ticket volume burdens do support teams face daily?

6. CUSTOMER CONSTRAINTS

What operational, technical, budget, skill, or legacy system integration constraints limit ticket classification workflows?

3. TRIGGERS

What specific events (e.g., peak ticket influx, SLA breaches, wrong team assignments) trigger the urgent need for automation?

7. BEHAVIOUR

How do agents and users currently handle, categorize, forward, and track tickets?

4. EMOTIONS: BEFORE / AFTER

How do support staff feel handling manual triage (Before) vs automated classification (After)?

8. CHANNELS OF BEHAVIOUR

- ONLINE: Digital portals, emails, ITIL queues
- OFFLINE: Phone, in-person desks

Through which online and offline channels do users and agents submit and manage tickets?

9. PROBLEM ROOT CAUSE

What are the core underlying reasons for misclassification, agent burnout, and delayed ticket resolution?

10. YOUR SOLUTION

Auto Ticket Classification Using Flow Designer
Describe the automated workflow rules, triggers, and routing mechanism.
