

Project Design Phase

Proposed Solution Template

Date	October 1 2026
Team ID	JEBA ASHIKA.X
Project Name	AUTO TICKET CLASSIFICATION
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	In traditional IT service management (ITSM), incoming support tickets are manually triaged and categorized by helpdesk agents. This manual process leads to frequent misclassification, improper routing to assignment groups, extended First Response Times (FRT), delayed incident resolution, high operational costs, and agent burnout during peak ticket volume surges.
2.	Idea / Solution description	The proposed solution automates ticket categorization and routing using ServiceNow Flow Designer. When an incident is created on the native incident table, automated flow logic analyzes key fields (Short Description and Description) against condition-based rules. The flow dynamically assigns the correct Category, Subcategory, and Assignment Group without requiring manual intervention from dispatchers.
3.	Novelty / Uniqueness	• No-Code / Low-Code Efficiency: Built natively within ServiceNow Flow Designer for seamless maintenance without complex external scripts. • Instant Real-Time Triage: Classifies tickets immediately upon submission, eliminating queue idle times. • Modular Rule Engine: Flexible condition pathways that can easily adapt to new IT services and organizational hierarchy updates.

4.	Social Impact / Customer Satisfaction	• Faster Incident Resolution: Automated routing ensures critical incidents reach specialized support teams immediately, lowering Mean Time to Resolve (MTTR). • Improved User Experience: Requesters receive faster status updates and faster resolutions. • Reduced Workload Burden: Service desk agents are freed from tedious manual dispatching, allowing them to focus on resolving high-priority technical issues.
5.	Business Model (Revenue Model)	• Internal Cost Reduction: Eliminates labor overhead and operational expenses associated with Tier-1 manual dispatchers. • Reusable ITSM Workflow Module: Can be packaged as a standardized, reusable ServiceNow workflow application or utility template for enterprise clients seeking ITIL process automation.
6.	Scalability of the Solution	• Cross-Departmental Expansion: Easily extends beyond IT service desks to HR Service Delivery (HRSD), Facilities, Customer Service Management (CSM), and Finance. • High Volume Handling: Effortlessly processes high concurrent ticket volumes during enterprise-wide system outages or updates on ServiceNow's cloud infrastructure. • Advanced Integration: Built to easily integrate with predictive intelligence, machine learning models, or external REST APIs as organizational requirements grow.
