

Acceptance Testing Report

UAT Execution & Verification Sign-off

Date	01-10-2026	Project Name	Auto Ticket Classification using Flow Designer
Team ID		Target Platform	ServiceNow Vancouver Release

1. Purpose of Document

The purpose of this document is to briefly explain the test coverage, defect resolution metrics, and functional test outcomes for the **Auto Ticket Classification using Flow Designer** project at the time of user submission to User Acceptance Testing (UAT).

This project automates IT incident categorization for school helpdesks by analyzing keywords in ticket descriptions using ServiceNow Flow Designer. It automatically populates Category and Subcategory choices, enforces field dependencies, and triggers automated email notifications to callers upon submission.

UAT Objective Met: 100% of core automation workflows, including keyword parsing (Wi-Fi, Projector, Password, Slow Computer) and dependent dropdown logic, were verified without critical blockers.

2. Defect Analysis

This report categorizes all defects logged during build and integration phases across standard severity levels and their final resolution state prior to UAT approval.

Resolution	Severity 1 (Critical)	Severity 2 (High)	Severity 3 (Medium)	Severity 4 (Low)	Subtotal
By Design	0	1	2	1	4
Duplicate	0	0	1	0	1
External	0	0	0	1	1
Fixed	2	5	8	6	21
Not Reproduced	0	0	0	0	0
Skipped	0	0	0	0	0
Won't Fix	0	0	1	0	1
Totals	2	6	12	8	28

3. Test Case Analysis

This section details the verification results for each functional module within the ServiceNow solution architecture. All 34 structured test scenarios passed execution successfully.

Section / Module	Total Cases	Not Tested	Fail	Pass
Update Set & Data Structure Configuration	4	0	0	4
Custom Table & Field Data Types	6	0	0	6
Category-Subcategory Dependency Rules	5	0	0	5
Flow Designer Keyword Automation Engine	10	0	0	10
Email Notification Trigger & Formatting	4	0	0	4
Security & Access Control (ACL)	3	0	0	3
Update Set Complete & XML Export	2	0	0	2
Totals	34	0	0	34

4. Key Scenario Validation Summary

Scenario ID	Description	Expected Behavior	Result
TS-001	Input SD: "WiFi not working in library"	Set Category = Network, Subcategory = Wi-Fi	Pass
TS-002	Input SD: "Projector not turning on"	Set Category = Hardware, Subcategory = Projector	Pass
TS-003	Input SD: "Forgot password to portal"	Set Category = Access, Subcategory = Forgot Password	Pass
TS-004	Input SD: "Slow computer during lab"	Set Category = Performance, Subcategory = Slow Computer	Pass
TS-005	Automated Email Trigger	Outbound log created with dynamic Caller address	Pass

5. Acceptance Sign-Off

The UAT execution confirms that the **Auto Ticket Classification using Flow Designer** application fulfills all specified business requirements, functions without critical open defects, and is ready for production deployment via XML Update Set import.
